

USE GREEN BUCKETS FOR THE FOLLOWING BATTERIES ONLY

- D-cell
- AAA-cell
- Lead acid, nickel cadmium, lithium ion, zinc and silver oxide.

Before disposing batteries, tape over the terminals using electrical tape (available on the bucket handle). Taping prevents batteries from shorting out which could result in fire.

DO NOT USE GREEN BUCKETS FOR THESE ITEMS

Green battery buckets are to be used for battery disposal ONLY. Please do not use these to dispose of trash, e-waste, universal waste, hazardous waste or anything other than batteries. Why? Disposing these other waste items can result in extreme health risks to those in the area as well as the Waste Management personnel that handle the battery buckets.

Do not use green buckets for these batteries:

- Large batteries that are unbroken and non-leaking (such as car batteries and uninterruptable power supply (UPS)). These should be sent to salvage (B79) through a transportation work request with a signed TAF form.
- Large batteries that are broken and leaking should be managed as hazardous waste in your Satellite Accumulation Area (SAA).
- Drill motor batteries and other rechargeable tool batteries can be returned to the vendor.

Do not use green buckets for these waste items.

Please contact the Waste Management Services Team Generator Assistance.
